

Test & Evaluation Sovereign Skills Program

Trials scheduler, planner

Our global structured and bespoke Test & Evaluation (T&E) Sovereign Skills Program aims to build and enhance T&E skills in Australia and Canada.

By training, mentoring and coaching individuals on the Program in one of nine roles, they will have the knowledge and skills needed to work in partnership with our customers, supporting them with their increasingly complex T&E projects.

The Program leverages QinetiQ's unrivalled T&E experience and expertise for the benefit of our customers globally, and reinforces and complements QinetiQ's strategy to remain a world leader in T&E.

This is one of nine roles available to apply for as part of the Program.

Please know that this profile is indicative and that we would still love to hear from you even if you feel you have only a partial skill match. We promote a diverse and inclusive culture and will support you to build the additional T&E skills you'll need for the future, as part of our innovative and highly experienced teams.

Role Purpose

The trials scheduler/planner will provide planning and technical advice to valued managers and customers on multiple test and evaluation trials and complex system engineering and integration deliverables.

Leading and coordinating a team of specialists to deliver quality outputs for a complex and fast moving programme, to reflect customer's prevailing requirements.

Plotting delivery progress against the plan, risk, challenges and opportunities to both internally and to the customer. The role is central in assuring that the test and evaluation trials planning/scheduling activities meets all safety, system integration and supportability requirements whilst supporting contract delivery.

Key Accountabilities

- Provide customers and site management with timely, safe and cost effective solutions and advice to planning/scheduling of test and evaluation trails.
- Provide support within test and evaluation planning/scheduling for in-line with current National, International and QinetiQ principles, practice and governance.

Key Capabilities/Knowledge

Should ideally be able to demonstrate knowledge of the areas listed below. Where the role holder does not hold these at the time of appointment a development plan will be in place to close the identified development gaps.

The requirement to hold these skills and knowledge is a safety critical requirement to support the role holder to undertake the role in a safe and appropriate manner.

Requirements:

- In depth knowledge of planning and scheduling systems
- Understanding of resource planning
- Planning/scheduling in relation to test and evaluation processes, systems, services and products. With application in one (or more) of air, land and/or maritime domains.
- Understands the wider industry and key stakeholders within the sector. This may include the Defence sector, Commercial environment and international influences.
- Develops and maintains long lasting stakeholder relationships
- Experience of test and evaluation trials planning/scheduling and acceptance activities
- Comfortable and competent in translating technical observations and details, into operational impact for the customer and end customer
- Operates with integrity and competence
- Thrives upon successfully delivering as part of diverse and multi-national team within a global company
- Ability to identify and mitigate risks
- Understand how to deploy and embed appropriate test and evaluation safety management systems as part of the programme lifecycle As Low As Reasonably Practicable (ALARP) principles risk management
- Understand the working environment and the human factors considerations.
- To ensure the product complies with all safety and regulatory requirements, product can be a trial, equipment, platform lead the completion of conformance reviews
- Ability to manage, influence and build long last stakeholder relationships
- Demonstrated competence in written and verbal communication, engagement and briefing skills

Experience & Qualifications

A minimum of 5 years in military engineering or related Defence industry role

OR

Demonstrated understanding and or experience of delivery of complex programmes; knowledge of safety critical environments and how to operate in this context; demonstrated knowledge or experience of successfully partnering with a customer to deliver.

Where the role holder does not currently hold a depth of defence sector knowledge or experience a comprehensive development plan will be in place to support the role holder in building the knowledge and capabilities described above.

Qualification Requirements:

Degree in Engineering (Aerospace, systems engineering, maritime or other relevant specialisation)

Other:

Must have or be able to obtain the required security status for the UK and either Australia or Canada.
