

What We Do: Mission-Led Services

QinetiQ US delivers comprehensive technical, programmatic, administrative, and intelligence services that enable critical missions. Our teams provide unique insights, specialized expertise, and mission support to help customers achieve operational success in today's complex defense and national security environment. Our singular focus on our clients' missions drives the adoption of new technologies and capabilities that protect our nation.

Our Services Portfolio

Administrative Services

- Strategic communications and stakeholder engagement
- Organizational and security support for mission-critical functions
- Knowledge management and information sharing
- Business operations and process improvement

Programmatic Services

- Program management and planning for complex initiatives
- Financial management and acquisition support
- Risk management and mitigation strategies
- Data assessment, policy development, and specialized training for operational readiness

Intelligence Services

- Expertise across all intelligence domains including SIGINT, HUMINT, MASINT, GEOINT, and OSINT
- Strategic, operational and tactical analysis specializing in time-sensitive and real-time intelligence
- Traditional Geospatial, Measurement and Signature Intelligence analysis
- Linguist/socio-cultural expertise and regional specialization

Technical Services

- Technical advisory and consulting services for mission-critical programs across the full lifecycle
- Advanced cyber capabilities including Computer Network Exploitation tools, offensive security, reverse engineering, and vulnerability research
- Cyber range construction and maintenance utilizing Dynamic Automated Range Technology framework
- Scalable automated solutions for cyber assessments, operational testing, and threat eradication

What Makes Us Different

Deep Bench of Subject Matter Experts

Technical expertise across complex domains guides development and ensures mission success

Mission-First Mindset

Our teams are passionate about the warfighter, driving innovation to accelerate capability delivery

Proven Innovation Partners

10 years supporting the Strategic Capabilities Office (SCO) and 6 years supporting the Space Development Agency (SDA)—we've grown alongside these innovative organizations designed to deliver capability at a rapid pace

Responsive Mid-Size Advantage

We combine the agility to pivot quickly with the technical depth and resources to solve complex problems

Risk Management Excellence

We balance innovation and speed of delivery by expertly managing risk to protect broader program integrity

Our Work in Action

Space Development Agency Support

- Recognized as the model for speed and efficiency within the Department—our team enables SDA's 111-day average from solicitation to award
- Helped build and design the Proliferated Warfighter Space Architecture with executable requirements and vendor management
- Comprehensive Systems Engineering and Technical Assistance support across all SDA functions, ensuring rapid capability delivery to the warfighter

Strategic Capabilities Office Support

- Nearly 10 years helping SCO rapidly prototype capabilities to address high-priority operational challenges and deliver strategic effects
- Achieved 72% average transition rate from prototype to fielded capability through expert risk management
- Supporting strategic planning and technical analysis while facilitating coordination with the warfighter to match solutions and needed capabilities

Space Systems Expertise

- Guiding acquisition paradigm shifts and delivering advanced space technology with rapid prototype lifecycle approaches
- Interfacing with Combat Commands and warfighters to align solutions with operational doctrine and mission requirements
- Enhancing space ecosystem understanding to enable faster, more effective decision-making across multiple domains

Intelligence Community Support

- Delivering analytical, technical, and linguistic services across the full intelligence lifecycle to address complex challenges from tactical to strategic levels
- Conducting real-time collaborative data fusion and analysis using forward-leaning methodologies across functional and geographic mission sets
- Applying specialized tradecraft and multi-perspective analysis approaches to deliver actionable intelligence products and mission outcomes

Special Operations Forces Support

- Providing specialized technical expertise and mission-specific solutions for unique SOF and Special Operations Command requirements
- Supporting rapid capability development and deployment for time-sensitive operations in complex environments
- Enabling seamless integration of advanced technologies into special operations tactical and strategic frameworks

Who We Are

QinetiQ US is a leading defense and national security company delivering mission-led innovation in advanced engineering, rapid prototyping, autonomy, ISR, maritime systems, force protection and survivability, and mission operations. We serve the U.S. Department of War, Homeland Security and other U.S. Government agencies, and allies with next-generation solutions that strengthen defense postures and support national priorities.
